# BURN PATIENT TRANSFER SYSTEM

Enhancing the effectiveness and timeliness of triage, transfer and patient management using an intuitive mobile app and a web-based, secure, redundant/resilient server architecture to input and track burn and trauma bed status/ availability for Burn Centers in the United States

- Easy-to-use intuitive interface on laptops, mobile, and tablets
- Burn trauma patient transport with point-of-injury for first responder interaction
- Supports First Responders for any mass casualty event
- Interface with TRAC2ES/ JPATS
